

INTEGRATED LOOK ON RETROFIT KITE, THE NEW E_BIKE REAR LIGHT FROM BUSCH + MÜLLER

Kite, the new rear light from Busch + Müller will spruce up the tail end of an E-Bike, and the wonderfully homogenous light-lines bring the design into the contemporary. These light-lines form triangular brackets towards the sides, providing unparalleled lateral visibility.

Kite has been developed especially for modern, narrow baggage racks which will suit the design and impression this light gives. Light design and rack will blend to one, so that the effect is aesthetically highly integrated, particularly for a retro-fit product.

Optional: BREX. Real brake light functionality, including an emergency hard brake signal. The integrated BREX-sensors recognise any braking process, and even differentiate between standard braking and emergency braking. In a standard brake procedure, the central BREX light portion will illuminate to signal the manoeuvre to following traffic. In an emergency brake procedure, this BREX area will flash a visual alarm to the rear, warning other participants and helping to avoid severe accidents.

Facts:

- E-Bike rear light
- U-shape surround visual
- Integrated look for retro-fit
- For narrow rack mount
- E-Bike voltage input 5-15 V (BREX: 6-48 V)
- Optional BREX version: brake und emergency brake signals

Kite, Typ 534022
MSRP 34,90 € / 59,90 €

Availability: Early 2024
