

New battery-powered indicator system TURNTEC T2: Practical and revolutionary indicators for all bikes

Dangerous hand signals are a thing of the past, because with the TURNTEC T2 indicator system from busch+müller, both hands remain on the handlebars at all times. A decisive safety advantage. Even in the dark, every turn is clearly visible.

A simple, quick movement with the palm of your hand is all it takes to activate the flashing signal. Other road users can see your intention to turn more clearly than ever before, as the newly developed TURNTEC T2 technology optimises both the direction of action and the light quality. In dangerous situations, it is even possible to activate the hazard warning lights.

The two indicators in their robust aluminium housing are located at the ends of the handlebars - on motorcycles, these are known as 'bull's eyes'. Installing TURNTEC T2 is extremely straightforward and can be done without any special tools.

With charge level monitoring. It can be easily recharged directly on the bicycle by connecting the charging unit to the USB-C socket on the left indicator unit.

busch+müller attaches great importance to sustainability, which is why TURNTEC T2 is also a friendly product. Both the battery and individual parts of the indicators are replaceable - user-friendly and resource-saving.

With the revolutionary TURNTEC T2 indicator system, all cyclists are visibly safer on the road.

busch+müller

Facts:

- Indicator system for all bikes
- Easy to use
